Spring Loaded Wonder

Algood's spring loaded series of casters is the perfect solution for accommodating varying capacities on uneven surfaces. With standard pre-load capacities starting as low as 100 lbs and deflecting .700" with loads of 1500 lbs., Algood's patented spring loaded casters provide the suspension to protect vital cargo from shock and vibration while reducing noise and extending caster life. These casters are fully customizable and can be configured as swivel or rigid, with a complete range of brakes and the full selection of Algood's wheel types and styles.

Algood's Patented Spring Load Scale

What makes Algood's spring loaded casters so incredible is the built in scale that indicates how much weight is on the unit. Algood's internal engineering department and fully resourced manufacturing facility allow us to develop customer focused caster solutions that meet requirements and budgets.
