Harder than Soft and Softer than Hard

When you need a wheel that is as durable as steel but as quiet as rubber, Envirothane™ is the perfect solution. This Algood specialty has high load capacities (up to 1600 lbs.), is non-marking and provides memory retention with no flat-spotting. Envirothane's one piece construction with no steel core means there will never be any core separation. Combine that with the fact that it's moisture friendly and chemical resistant and you have a wheel that is virtually maintenance free! Because all Envirothane wheels are produced in our North American manufacturing facility, we can provide wheels from 7/8" to 8" in custom colours with custom durometer – with lead times in weeks, not months. Best of all, Envirothane™ is 100% recyclable, making it an environmentally responsible choice.

For more information on these and other great caster innovations from Algood, visit us our [website](#) or send us an [email](#).
