

**Lights, camera, action.  
Tryke™ action, that is.**

We don't often associate casters with the entertainment industry but the reality is that sound stages and theatrical sets have unique caster requirements. Algood's Theatrical Tryke™ is the perfect solution. It provides smooth, uninterrupted, free flow swivel and is designed with three casters mounted to a triangular top plate. The result is that minimal force is required to manoeuvre casters from the lead to the trail position and more weight can be moved with less effort. The beauty of the Tryke is that it can be fully customized depending on the casters and wheels that are mounted to the plate. Overall height can therefore vary and capacity of up to 20,000 lbs can be accommodated. In addition to studio and stage applications, the Tryke has been used for the mining industry, tow lines and automatic guided vehicles (AGVs).
