

This caster swings into action

Being able to swing open a door that is wide or heavy requires a caster that can meet a unique set of circumstances. Mounted on the door or gate, the caster must deflect to meet potentially uneven surfaces while maintaining the integrity of the door itself. Algood's Gate Spring Loaded (GSL) casters are up to the challenge. With deflection from 5/16" to 1-3/8", travel of up to 3" and capacity to 500 lbs, the casters can meet varied conditions and are ideal for a number of applications. Algood customers have used the GSL for an incredible range of uses including rink doors, stadium doors, sliding hangar doors, military gates, ladders and gantries for ocean vessels.

Custom Manufacturing is our specialty

The Gate Spring Loaded can be customized for any deflection and capacities up to 10,000 lbs. This triple spring loaded caster was custom manufactured to be mounted on two 20 foot gates at a secure military facility.

Contact Algood with your specifications and we'll make sure that your casters swing into action.
